

YEAP BOON SHEN

SOFTWARE DEVELOPER | CYBERSECURITY

011-63369388 | boonshen1159@gmail.com | https://yboonshen.github.io

Education

Bachelor of Information Technology (Hons) Security Technology

Multimedia University (MMU), Melaka

CGPA: 3.85 / 4.00

Foundation

Multimedia University (MMU), Cyberjaya

Skills & Tools

Programming Languages

Java, Python, SQL
JavaScript, TypeScript, C++

Web & Frameworks

FastAPI, Flask, React, Node.js
Angular, JSP, Cordova, HTML/CSS
REST APIs, SOAP/XML, JWT

Databases

MySQL/MariaDB, PostgreSQL
IBM DB2, Firebase

Development & Deployment

Git/Gerrit, Bugzilla, JBoss EAP
SoapUI, DBeaver, Linux, PuTTY/SSH
Oracle Cloud, Eclipse, Android Studio
Codex, Claude Code, Antigravity

Security Tools

Burp Suite, OWASP ZAP, WebGoat
THC Hydra, enum4linux, CyberChef

Languages

Chinese | English | Bahasa Melayu

Profile

I am a fresh Information Technology graduate from MMU, majoring in Security Technology. I enjoy building web applications and use AI coding tools to help plan, build and debug projects.

I am seeking a full-time role in software development or cybersecurity and am available to start in **November 2027**.

Degree Internship

Cyber Village Sdn Bhd | Silverlake Axis

Trainee Java Software Developer | Jul – Oct 2026

• Developed Bank Muamalat internet banking features in Java/JSP (web) and Angular/TypeScript (mobile).
• Fixed a DuitNow AutoDebit bug that looped page reloads when the merchant redirect URL was missing, using log tracing, SoapUI and SQL.
• Built SIBS dummy-host responses and test cases for FPX placement and account-creation flows.
• Used AI coding agents to trace legacy code and draft fixes; reviewed and tested every change before Gerrit review.
• Deployed EAR packages to SIT manually via PuTTY/SSH and FileZilla, checking JBoss processes, ports and logs.
• Wrote two guides for Bank Muamalat and Tabung Haji: web/mobile setup for new joiners and SIT deployment steps.

Final Year Project

HackTheMMU | CTF Learning Platform

• Developed a web-based CTF platform for students to explore cybersecurity through hands-on challenges.
• Created 21 challenges across 7 categories, with Easy, Medium and Hard levels.
• Developed student and lecturer features, including class enrolment, teams, flag submissions, hints, achievements and leaderboards; built a dashboard for lecturers to manage classes and challenges, monitor progress and export reports.
• Developed an AI security challenge using prompt injection against a locally hosted language model.
• Implemented JWT, bcrypt, email verification and role-based access; hosted on Oracle Cloud for peer testing (UAT).
• Planning Docker deployment, a custom domain, HTTPS and CI/CD for automated releases.

Workshops & Training

AI Exploration Workshop

UTeM · Explored generative AI and Ollama, and presented a Telegram chatbot (2025).
AIHQ / ChatGPT Malaysia Hub · Watched AI training videos and completed a quiz (2025).

IBOH26 Prep Workshop

APU FSECSS (2026)
Joined an online team workshop and solved guided CTF challenges in binary exploitation, web security and blockchain.

MMU CTF Lab Competition

Completed all challenges in forensics, cryptography, steganography and network security.

Achievements

Top 10 Finalist

UTAR Hack Attack 3.0 (2026)
Led Team Soda and presented AI Passport, an AI governance solution for workplaces.

MMU Business Intelligence (2025)
Presented JUST Press: an idea to connect services via MCP and control them with one press.

Participation

CodeNection Hackathon (2025, 2026)
AWS CendekiAwan 2.0 (2025)

UTAR Hack Attack 3.0 (2026) • AI Passport

React / Node.js / Firebase / Gemini API

• Built with a team of four from MMU Melaka: a browser extension to help companies reduce the risk of sensitive data exposure when using AI.
• Developed a browser extension that detects and masks sensitive data locally before a prompt reaches ChatGPT or Claude.
• Designed a levelled licence system: employees complete training and quizzes to unlock more AI tools, with human review before each level is granted.

MMU Confessions Web App (Group Project)

UI/UX Design / Figma / Frontend

• Designed the user interface and experience in Figma before frontend development.
• Integrated Cloudinary for image uploads and SMTP2GO for transactional email.
• Built an anonymous confession platform for MMU students, with APIs for search, notifications and infinite scroll.
• Implemented bcrypt password hashing, email verification, Microsoft OAuth login and admin moderation.
